Experience

- **Infosys Limited** *Jul'25 - Aug'26*

  Digital Specialist Engineer

  – Modernized **Pfizer's PVAI platform** by upgrading legacy **Java 8** services to **OpenJDK**, replacing outdated libraries and resolving cross-project compatibility issues across the application stack.
  – Enhanced Pfizer's **JT application** built on Oracle Argus by implementing **Java and PL/SQL** workflows, isolating Japan-specific case data and resolving **3 critical dependency integrity issues** to maintain reliable application builds.
  – Spearheaded **Azure CI/CD pipeline modernization** for the PVAI platform, automating builds and **WAR artifact generation** and reducing deployment failures by **30%**.
  – Optimized Pfizer's **S3-based deployment workflow** by reconciling **POM and configuration artifacts** across environments, reducing deployment turnaround time by **25%** and ensuring consistent release configurations.

- **Zycus Infotech** *Jan'25 - Jun'25*

  Software Engineering Intern

  – Drove the development of microservices for **bidding and invoice automation**, live supplier bidding helps reducing the **average supplier response time by 15%** and increasing processing efficiency.
  – Extended **Java Spring Boot** backend services and supported legacy PHP to Java microservices migration for the **Source-to-Pay platform**.
  – Reduced database contention in procurement workflows by **5%** by optimizing data access with **MongoDB** and backend caching in **Java Spring Boot** services.
  – Added **integration tests** covering **75% of critical backend workflows** in procurement services.

Projects

- **CogniScript** | MongoDB, Express.js, React.js, Node.js *Jun'23 - Aug'24*

  under Prof. Krishna Asawa LIVE Github

  – Engineered and Constructed scalable backend services for an **online educational platform** for universities, enabling automated quiz assessments and improving grading efficiency by **40%**, while reducing administrative workload.
  – Integrated the **OpenAI API** to automate evaluation of theoretical answers, improving grading consistency and significantly reducing manual review effort for instructors.
  – Validated the application with over **500 students**, achieving approximately **82%** accuracy in real-world usage.
  – Optimized performance by **streamlining Node.js** modules, reducing load times by **6%** and delivering a polished, user-centric interface.

- **Splitwise** | Spring Boot, Java, REST API, TypeScript, MongoDB *Jan'23 - Feb'23*

  Smart India Hackathon'23 Github

  – Collaborated to develop a **Splitwise-style expense sharing application** using **Java Spring Boot** and **React**, designing **REST APIs** for group expenses and real-time balance tracking.
  – Engineered **debt simplification logic** to consolidate balances and cut settlement transactions by **40%** across group expenses.
  – Orchestrated the implementation of a settlement history and audit trail, and enabling users to review payment activity for up to **60 days** with automated weekly reminders for pending settlements.
  – Secured backend APIs using **JWT-based authentication**, enforcing user and group-level authorization.

Technical Skills

- **Programming Languages**: C/C++, Java, JavaScript, TypeScript, SQL, PL/SQL.
- **Web & Backend Development**: React.js, Node.js, Express.js, Spring Boot, Socket.io, JSP.
- **Databases, Messaging & Cloud**: Oracle, MongoDB, Apache Kafka, Redis, AWS (EC2, S3, IAM), Azure.
- **Developer Tools & Build**: Git, GitHub, Docker, Maven, Gradle, JUnit, Postman, Azure DevOps, CI/CD.

Achievements

- **3 Star Coder**, CodeChef *Jan'23 - Present*
- **Top 10% in Weekly Contests**, Rating:(1800), LeetCode *Mar'23 - Present*
- **Technical Lead**, Optica, JIIT Noida *Jun'23 - Nov'25*

Education

– **Jaypee Institute of Information Technology** *Sep'21 - May'25*

Bachelor of Technology in Computer Science Noida, India
